

RATHISH

Backend Engineer — Fintech & Crypto Systems

rathish642004@gmail.com · 9750999906 · Chennai, Tamil Nadu · LinkedIn · GitHub

PROFILE

Backend Engineer with sole ownership of two production systems built entirely from scratch — a live OTC crypto trading platform (Django/DRF) and a complete admin backend (NestJS). Proven ability to architect, build, and maintain high-volume fintech infrastructure independently. Deep expertise in async processing, real-time systems, blockchain integrations, and regulatory compliance frameworks (KYB, Travel Rule, TRM). Fluent across Python and Node.js ecosystems.

TECHNICAL SKILLS

Backend: Python, Django, Django REST Framework, Node.js, NestJS

Async & Real-time: Celery, Redis, WebSockets, Event-driven architecture

Databases: MongoDB, MySQL

Security & Compliance: RBAC, JWT authentication, IP-based access control, KYB, Travel Rule, TRM

Blockchain: Wallet integration, on-chain transaction tracking, Exchange API integration

DevOps & Deployment: AWS, Nginx, Uvicorn, Linux

API Integrations: Binance API, CoinSwitch API, Blockchain compliance APIs

Core Concepts: System design, DSA, REST API architecture, Performance optimisation

PROFESSIONAL EXPERIENCE

Backend Engineer

Apr 2025 – Present

INOCYX Technologies Private Limited

Chennai, Tamil Nadu

- Sole architect and developer of a production-grade OTC crypto trading platform — designed the entire system from database schema to API layer, currently serving live high-volume users
- Engineered 200+ RESTful APIs covering trade execution, wallet operations, user management, order workflows, and compliance — all built and maintained solo
- Built WebSocket-based real-time systems for live trade price updates, order book feeds, and push notifications handling concurrent production-scale connections
- Designed async processing pipelines using Celery and Redis for task queuing, background job scheduling, and event-driven workflows in a high-throughput environment
- Integrated blockchain wallet systems enabling secure crypto deposits, withdrawals, and on-chain transaction tracking across multiple networks
- Implemented full regulatory compliance stack: KYB (Know Your Business), Travel Rule, and TRM (Transaction Risk Monitoring) for AML-compliant operations
- Solo-built a complete admin backend in NestJS from zero — full RBAC with granular permission management, JWT authentication, IP allowlist/blocklist enforcement, and modular role hierarchy
- Contributed to Node.js crypto exchange backend — developed core trading APIs and optimised query performance on a live high-throughput system
- Managed production deployment on AWS with Nginx and Uvicorn; solely responsible for uptime, monitoring, and incident resolution

Backend Developer Intern INOCYX Technologies Private Limited

Jun 2024 – Mar 2025
Chennai, Tamil Nadu

- Built CoinDeck solo — a crypto dashboard in Django integrating CoinSwitch APIs for real-time asset tracking, portfolio management, transaction history, and withdrawal flows
- Developed an automated trading bot using Django and Binance API — rule-based buy/sell order execution with configurable strategies and real-time signal processing
- Progressed from intern to sole owner of the company's core production platform within 10 months

PROJECTS

OTC Trading Platform Backend (Solo) | *Django · DRF · Celery · Redis · WebSockets · MongoDB · AWS*

Production system designed, built, and maintained entirely solo. Full backend covering secure trade execution APIs, real-time WebSocket updates, async task processing, blockchain wallet integrations, and AML compliance (KYB, Travel Rule, TRM). Deployed on AWS with Nginx and Uvicorn, serving live users at production scale.

Admin Backend (Solo) | *NestJS · Node.js · MongoDB · JWT*

Built from zero to fully operational independently. Complete admin system with hierarchical RBAC (role creation, permission assignment, access scoping), JWT-based secure authentication, IP allowlist/blocklist enforcement, and modular architecture for multi-tenant extensibility.

CoinDeck — Crypto Dashboard (Solo) | *Django · DRF · CoinSwitch API*

Private-use crypto dashboard with real-time asset tracking, portfolio management, and transaction management via CoinSwitch API integration. Full backend ownership including authentication, data normalisation, and API layer.

Automated Trading Bot (Solo) | *Django · Binance API*

Rule-based automated trading bot integrating Binance APIs — configurable buy/sell strategies, real-time price signal processing, and automated order execution workflows.

EDUCATION

B.E — Electronics and Communication Engineering Jeppiaar Engineering College

2021 – 2025
Chennai, Tamil Nadu

CERTIFICATIONS

- Programming, Data Structures and Algorithms using Python — NPTEL
- Advanced Django REST Framework — Coursera
- Programming with JavaScript — Coursera
